HYDRAPOWER

AUSTRALIAN MADE SINCE 1981

RBH-01 Bucket Brooms

Hydrapower's **RBH-01** Reverse Sweep Bucket Brooms couple to the existing quick hitch on your loader and uses the auxiliary hydraulics to drive the brush. The unit is manufactured to 2400 mm (95") with the overall width being 2880 mm (113").

The "RBH-01" Bbucket Brooms is recommended for working over uneven ground and surfaces where mud and dirt is compacted on the ground. The bolt-on cutting edge can be used to scrap against the ground and break free the dirt. The opened brush face can push down into uneven surfaces and move the material onto a level surface where it can be picked up cleanly by the bucket broom.

For optimum sweeping efficiency, it is recommended that you reverse when sweeping. A 50/50 mixture of 860mm (34") outside diameter poly and wire brush segments are supplied as standard although this ratio can be altered to suit your application. Turning the adjustment bolts located on each side of the bucket controls brush contact.

The main brush is driven directly off twin hydraulic motor via a urethane-coated drive coupling, thereby eliminating chain and sprockets wear parts.

MAXIMUM INTERMITTENT PRESSURE: 207 bar (3000 PSI)

OPERATING FLOW RATE: 150 – 200 l/min (40 - 53 GPM)
MASS: 1000 kg (2204 lbs)
